The greenish flowers occur in clusters of five or more at the end of a slender stalk, and the fruit, which is orange shaped and greenish white or tinged with red, is one-third of an inch in diameter. This may be only a stunted form of the typical species. It is a native of Japan and is cultivated in the New England States. 43687. EUONYMUS RADICANS VEGETUS Rehder. Celastraceæ.

The dull-green, thickish leaves are broadly oval and obtuse, and the greenish white flowers occur in rather dense cymes. The fruit is a greenish white capsule, inclosing a bright-orange aril. Both flowers and fruits appear in great profusion, and it can be recommended as a broad-leaved evergreen for cold regions. (Adapted from *Sargent, Trees and Shrubs, vol. 1, p. 130 and pl. 65.*)
